Background

I am a **SSE**, with **5.5 years** of experience in using **Golang, Python, Java, C & C++** and developing **CLI** tools, **Data Engineering** tools, **Web development**, **Automotive** software & Data Pipelines.

Education

B.E. ELECTRONICS

Ramdeobaba College Of Engineering & Management, Nagpur

2014-2018

8.79/ 10 CGPA

Skills

- Python
- Golang, RMQ, Redis cache.
- Data tools- Pandas, Pyspark
- Django
- DB - PSQL, SQLite, MySQL
- CI/CD- Jenkins
- Pyspark
- Batch scripting
- Bitbucket
- Artifactory
- Jira & Confluence
- GUI Development - Tkinter, Kivy
- Web API Automation
- Text mining - Regex
- Polaron
- HTML & JS
- Agile
- Embedded - C, C++
- Golang
- Power BI
- QGIS
- NDS Standards (AV-navigation)
- AUTOSAR
- ASPICE
- Matlab
- Selenium

Summary

Rich Experience in managing and developing micro services in go, writing SIT and JIT tests in Java, automating manual tasks in python, delivered production ready code, fixed bugs. I have been working with Agile teams.

Work Experience

SSE | Encora, Pune | Mar'2023-Current

- Project : Platform Engineering.
 - Team Size: 8 Members (Agile)
 - Description: Writing scalable **go code** to develop APIs for microservices that allow users and admins to signup and signin to platform & fixing bugs.
 - Key Result Areas:
 - Writing effective, scalable code in **Golang**.
 - Deploy solutions using **Docker, Kubernetes & GCP-Rancher**.
 - Developing, testing and debugging programs.
 - Logs investigations for the bugs identification.

Engineer | RedHat, Pune | Oct'2022-Jan'2023

- Project : Openshift Tool Development.
 - Team Size: 4 Members (Agile)
 - Description: Writing scalable **go code** to test OpenShift tool, using **gauge** framework.
 - Key Result Areas:
 - Writing effective, scalable code in **Golang**.
 - Designing & implementing solutions using **Docker, Kubernetes & OpenShift**.
 - Developing, testing and debugging programs.

Engineer | Mercedes-Benz, Bangalore | June'2021-Oct'2022

- Project : Maps Dynamic Data (Collection and validation) Tool Development.
 - Team Size: 4 Members (Agile)
 - Description: Development of tool to collect data from online sources and validate the vendor map for the dynamic content of the map.
 - Key Result Areas:
 - Produced high quality code that is robust, efficient and maintainable in **Python**.
 - Contributed to the management of the end-to-end delivery of well-defined technical project and solutions.
 - Creating Data Piepines using **Python** & providing **Data Engineering** solutions.
- Project : Map data validation with NDS standards.
 - Team Size: 9 Members (Agile)
 - Description: Development of test scripts for vendor map against **NDS standards**.
 - Key Result Areas:
 - Managing a team of 5 members, sprint planning & effort estimation.
 - Developing effective mathematical **Python** scripts for Map Geometry validation.

- Project : AUTOSAR SWC Development.
 - Team Size: 18 Members (Agile)
 - Description: Deliver Implementation of features in **AUTOSAR SWC** required by Ford **ADAS** Vehicle.
 - Key Result Areas:
 - Writing effective, salable code in **Embedded C & C++** for application layer of AUTOSAR.
 - Following **ASPICE** safety standards for safest **SDLC** (V-model).
 - Understanding and developing **ADAS** features.
- Project : Static Code Check Tool Development.
 - Team Size: 10 Members (Agile)
 - Description: Automation of interface testing of **AUTOSAR SWC** using **Python, CANoe, Trace32.**
 - Key Result Areas:
 - Delivered modules for an end-to-end solution for **AUTOSAR** Static Interface testing.
 - Written parsing modules for **DBC** and beakpoint application module for **Trace32.**
- Project : ETL Design & Dash-boarding for L&T Work flow across the verticals.
 - Team Size: 6 Members (Agile)
 - Description: Reporting of resource utilization in automotive projects at LTTS & Generating estimated ROI value dashboard.
 - Key Result Areas:
 - **Python** data extraction modules development using, **selenium** and APIs.
 - Developed extraction modules for task progress following from **Polarion, Jira, DOORS & Reviews.**
 - Developed Dashboards in **PowerBI** Tool.
- Project : ARXML Parsing & Visualization Tool Development.
 - Team Size: 6 Members (Agile)
 - Description: Development of ARXML visualization tool to view properties of various interfaces for, AUTOSAR components.
 - Key Result Areas:
 - Developed a **Go** server to serve **ARXML** parser webpage on localhost.
 - Developed a **React** front end to perform visualization.
